

Sandia National Laboratories

Autonomous Combustion-Powered Hopping Robot

BENEFITS

- Energy efficient combustion technology
- Can overcome a variety of obstacles & environments
- Self-orienting
- Long-range travel
- Situational awareness
- Autonomous mobility
- Lightweight & reduced size

APPLICATIONS

- Search & rescue missions
- Space exploration
- Law enforcement & first responders
- Environmental assessment

U.S. PATENTS

- 6,247,546
- 7,775,305
- 6,286,386
- 6,308,791
- 6,328,002

Summary

Sandia's hopping robotic platform provides a groundbreaking, energy efficient capability. Hopping mobility has been shown to be five times more efficient than hovering when traversing obstacles at heights under 10 meters.

Two versions of the robots exist. One being about the size of a grapefruit and capable of approximately 4,000 hops on a single tank of fuel (less than an ounce) of about 3 feet high and 6 feet from the starting point of the jump-pictured below. The other is about the size of a shoe box and able to overcome as many as 30 obstacles that are over 20 feet high with

about 100 hops per tank of fuel.

The four-wheeled version of the robot overcomes traditional barriers associated with long-range missions and terrain including management of shock forces, hop height, and efficiency. Furthermore, the robots are equipped with compasses or GPS that allows them to orient themselves once landed.

Licensing & Partnering Status:

Various licensing and partnering options are available. Please contact the Intellectual Property Department to discuss.

Technology Readiness Level:

Sandia estimates this technology at a TRL 6-7. Prototypes have been demonstrated in relevant, operational environments.

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the United States Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000. SAND #2011-0309P
